

## SWITCH036

### AIRBASE INDUSTRIES PRESSURE SWITCH

Main screw- Clockwise increase BOTH cut in and cut out. MAXIMUM is 185 PSI (Recommended 175PSI). Counterclockwise decreases cut in and cut out. One full rotation is equivalent to roughly 10 PSI difference.

Differential Screw- Should not be used. It is set at a 40PSI differential from the factory.

#### IMPORTANT:

Wiring: wires must not cross sides and result will be damage to switch and possible shock hazard to operator. Lines must maintain vertically paired placement only.
